

Copilot

Yes, many modern Python documentation generators are able to read type hints. Tools like Sphinx, Pydoc, or Pdoc can parse type hints and include them in the generated documentation. This can make your documentation more informative and easier to understand.

However, it's important to note that while type hints can provide valuable information, they are not a substitute for good comments and docstrings. Even if you use type hints, you should still include comments and docstrings that explain what your code does, why it does it, and how it should be used.

In summary, you can certainly use type hints with your documentation generator, but don't neglect the importance of clear and comprehensive comments and docstrings. Happy coding! 😊
