Copilot

The `initexmf --update-fndb` command is run from the command prompt (also known as the command line or terminal), which is a text-based interface used to run commands on your computer.

Here's how you can do it on a Windows system:

1. Press the `Windows key + R` to open the Run dialog box.
2. Type `cmd` and press `Enter` to open the command prompt.
3. In the command prompt, type `initexmf --update-fndb` and press `Enter`.

Please note that you might need to run the command prompt as an administrator to have the necessary permissions to update the filename database. To do this, search for `cmd` in the Start menu, right-click on `Command Prompt`, and select `Run as administrator`.

Remember, this command is specific to MiKTeX. If you're using a different TeX distribution or operating system, the command might be different. Always refer to the documentation of your TeX distribution for the correct commands. Happy LaTeXing!
